/clone lib="Mouse Organ of Corti cDNA pBluescript; The /note="Organ: Organ of Corti; Vector: pBluescript; The organ of Corti (OC) was fine dissected from a total of 386 organ of Corti (OC) was fine dissected from a total of 386 organ of Corti (OC) was fine dissected from pp; 20 from p10; 14 from p5; 60 from p7; 46 from p8; 18 from p9; 20 from p10; 14 from p12 and 24 from p13 After killing animals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack kit (catalog # K1593-02; Invitrogen, Carlabad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA), uSA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was sprimed with bnA polymerase and transcribed using Moloney murine leukemia virus reverse transcribed using Moloney murine leukemia virus reverse transcribed with Sto I site. First strand synthesized with DNA polymerase and RNase H. Complementary DNA was bunt ended with Ftu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs was sendenced with Gigapak in the phagemid was packaged with Gigapak in the phagemid was packaged with Gigapak the phage library was estimated to be 11,100,000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                301-402-1765
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          db_xref="taxon:10090"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /mol_type="mRNA"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using Pops polymer (Applied Biosystems, Foster City, CA).

The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 12% are uncharacterized ESTs and 20% are unidentified."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGACC) and 25% universal M13 reverse primer (CAGGAAACAGGTATGA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  89.3%;

epithelium was carefully dissected out of the modification of the modified (Catalog # K1593-02; Invitrogen, Carlabad, CA), according to manufacturer's instructions, Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector kit (Catalog # 23721; Stratagene) and Uni-Zap XR vector bed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker-primer and transcribed using philosophy murine leukemia virus reverse transcribed with Stratagene; primer and transcribed using philosophy murine leukemia virus reverse transcribed using philosophy murine leukemia virus reverse transcribed using philosophy murine leukemia virus reverse and digested with EcoR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated with EcoR I and Xho I. The cDNA was then directionally ligated to the Uni-Zap XR vector, which had been predigested with EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with Giagapak EcoR I and Xho I. The phagenid was packaged with the phage Ilhary was adopted to resident highly the phage Ilhary was adopted to resident highly the phage Ilhary was adopted to resident highly the phage Ilhary was adopted

organ of Corti (OC) was fine dissected from a total of 386
organ of Corti (OC) was from post-natal (P) day 5; 72
OC as follows: 102 samples from post-natal (P) day 5; 72
from p6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from p12 and 24 from p13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Location/Qualifiers

epitnelium was Carefully unsected on or the modicion Total RNA was extracted using the micro fastirack kit (catalog # K1593-02; Invitrogen, Carlabad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 23721; Stratagene) and Uni-Zap XR vector kit (catalog # 23721; Stratagene) and Uni-Zap XR vector kit (catalog # 23721; Stratagene) and Uni-Zap XR vector kit (catalog # 23721; Stratagene) and Uni-Zap XR vector kit (catalog # 23721; both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly; 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukenia virus reverse transcribeds with follow the follow as sequentially size fractionated with Moloney murine leukenia virus reverse transcribed with EcoR I adapters in the presence of ligase and digested with EcoR I adapters in the presence of ligase and digested with EcoR I adapters in the presence of ligase and digested with EcoR I and Xho I. The cDNA was sequentially size fractionated over pharmacia Size Sepado (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) oclumns to enrich for cDNAs greater than 400pp and 1000 bp respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with the Uni-ZAP XR vector, which had been predigested with Giapapak II Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recipied with EcoR I and Xho I. The phagenid was packaged with Giapapak to rescue plasmid DNA from the phages. Upon plating of the rescued library, and growth plate. Plasmid DNA was adopted to rescue plasmid DNA clones were generated with the Carlsbard CNA) as instructed by the manufacturer. ESTs from the phages. Upon plating of the universe universe combinators 160 a capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. was removed and opened in Leibowitz medium. The bony 93.3%; Score 294.8; DB 1 Pred. No. 2.6e-81; DB 13; Length 560;

14 from p12 and 24 from p13. After killing animals by
15 cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total RNA was extracted using the micro Fasttrack kit
(catalog # K1593-02; Invitrogen, Carlsbad, CA). according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA) and analyzed on 3700 automated capillary sequencers using pop5 polymer (Applied Biosystems, Foster sequencers using pop5 polymer (Applied Biosystems, Foster city, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of 1.4% 11-50 and 0.6% 51-150. As to gene function; 23% genes are present in GenBank and have know function; 12% are uncharacterized ESTs and 20% are unidentified."

                                                                                                                                                                                                                                                                                                                        primed with the linker primer and transcribed using Moloney murine leukemia virus reverse transcriptase (MMILV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase and RNAse H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with kNo I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml grownth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbada, CA) as instructed by the manufacturer. ESTs from

/note="Organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
                                   Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, WA), and analyzed on 3700 automated capillary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was reversed with the linker system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack kit (Catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and
sequencers using POP5 polymer (Applied Biosystems, Foster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /organism="Mus musculus"

Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 23721). Stratagene) and Uni-Zap XR vector kit (catalog # 23721). Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (la Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 up mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase and strand wath EcoR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagenid was packaged with Gigapak III Gold and, upon tirtation on XLI Blue MRP cells, the yield of the phage library was estimated to be 11,100,000 resistance helper phage (Stratagene's ExAssist Interference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on M Teurad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA).

The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CACGAAACAGCTATGACC) and 25%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochiea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack kit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /clone_lib="Mouse Organ of Corti cDNA pBluescript"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Fax: 301-402-1765
ECOR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with ECOR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XhI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual CDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on M1 Tetrad thermal cyclers (MN Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA).

The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Glgapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase. ligated with DNA polymerase and strand was synthesized with under the property of ligated with DNA polymerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni Zap XR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /dev_stage="Post natal day 5 to 13"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (bases 1 to 490)
                 was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA olymprase and DNAse W Completer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of hearing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              kacharb@nidcd.nih.gov

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ECOR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The cDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XII Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exassist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescue dlibrary, individual cDNA clones were selected and grown in 96 well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal Ml3 reverse primator secuencing chemistry (Applied
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." 91 a 77 c 109 g 112 t 1 others

//clone lib="Myouse Organ of Corti (DNA pBluescript"
//note="Organ: Organ of Corti, Vector: pBluescript; The
//note="Organ: Organ of Corti, Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total RNA was extracted using the micro Fasttrack kit
(catalog # K1593-02; Invitrogen, Carlsbad, CA); according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
Gigapack III Gold Clonning kit (catalog # 237612), both
from Stratagene (La Jolla, CA, USA), according to
manufacturer's instructions. Briefly: 1.5 ug mRNA was
reverse transcribed using a hybrid oligo(dT) linker-primer
that contains an Xho I site. First strand synthesis was
pinned with the linker- primer and transcribed using
Moloney murine leukemia virus reverse transcribed with
EcoR I adapters in the presence of ligase and digested
with Xho I. The cDNA was sequentially size fractionated
over pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden)
and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA)
columns to enrich for cDNAs greater than 400b and 1000 bp
. respectively. The cDNA was sequencially ligated to
the Uni-Zap XR vector, which had been predigested with
EcoR I and Xho I. The phagemid was packaged with 61gapak
III Gold and, upon titration on XLI Blue MRF cells, the
resistence hellowed the formal counter of the phage of the phage of the phage of the phage of the phage of the phage of the phage of the 
                                                                                  resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from
the 5' end of the cDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1. .604
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    'sex="male and female"

Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." 81.7%; Score 269.6; DB 13; Length 604; 93.7%; Pred. No. 2.2e-73; 0; Mismatches 19; Indels 0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BQ565179.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TATTTCCCCAGCAACTTGGTGAAGGAGCAGCGTGTATACCAGGAGGCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /dev stage="Post natal day 5 to 13"
//dev stage="Post natal day 5 to 13"
//clone lib="Mouse Organ of Corti (DNA pBluescript; The
/note="Organ: Organ of Corti, Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modicils.
                                                                                                                                                         Total RNA was extracted using the micro Fastrack kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR Gigapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker-primer and transcribed using Moloney murine leukemia virus reverse transcriptase (MLV-RT) and 5-methyl dCTP. The second strand was (MMLV-RT) and 5-methyl dCTP. The second strand was
synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligase and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /mol_type="mRNA"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAB greater than 400bp and 1000 bp / respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XII Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (PAGGAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank, but do not have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Mismatches 17; Indels

8132.484 Million cell updates/sec
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases a well as pathologic angiogenesis. AAF59063 to AAF69093 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinfilammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases well as pathologic angiogenesis. AAFS9063 to AAFS9122 to AAFS9132 represent sequences used in the exemplification of the present invention.
            Mouse MLP nucleotide sequence SEQ ID NO:10.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse MLP nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11-JAN-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200102564-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAF59093 standard;
                                                                                                                                                                                                                                                                                                                          The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                     The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases a well as pathologic angiogenesis. AAF59063 to AAF69132 to AAF69132 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   26-FEB-2002
The invention relates to an isolated novel secreted polypeptide (I) and polynucleotide (II). (I) and (II) are useful for treating cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and psychiatric diseases, cardiovascular diseases, respiratory diseases,
                                                                                                               New secreted proteins or polypeptides, useful for treating e.g. cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        renal diseases, or gastrointestinal diseases. These may also be used to treat diseases, abnormalities and disorders caused by abnormal expression, production, function and/or metabolism of the genes, as expression methods for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify membrane-bound or soluble receptors. The polypucleotides may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the coding sequence of novel human secreted protein #12.

This signature analysis, and Sanger sequencing techniques. This expressed sequence tag was used in the assembly of a full-length expressed sequence tag was used in the assembly of a full-length cDNA sequence (see AAH26343) encoding a novel human growth CDNA sequence (see AAH26343) encoding a novel human growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16372272, which was obtained from a human thymus cDNA library using standard PCR with primers specific for vector sequences flanking the inserts, sequencing by hybridisation sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2001-483233/52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    growth and tumours, including neuroectodermal tumours such as gliomas. The polynucleotides can also be used to design probes and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of Hyseq clone identification number

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to CC ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, CC antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic CC activities, and can be used in gene therapy. The PRO polynucleotides, CC proteins, agonists and antagonists are useful for treating or diagnosing CC proteins, agonists and antagonists are useful for treating or diagnosing CC a cardiovascular, endothelial or angiogenic disorder in a mammal, CC e.g. cardiac hypertrophy, trauma, cancer, age-related macular CC degeneration, atherosclerosis, hypertension, arterial restenosis, rhumatoid arthritis, angina, myocardial infarctions, thrombophiebitis, CC promatoid arthritis, angina, myocardial infarctions, thrombophiebitis, CC carcinomal and wound healing. The PRO polynucleotides have applications CC in molecular biology, including use as hybridisation probes, and in CC chromosome and gene mapping. ABL88259 to ABL88267 represent primers and CC probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18-SEP-2000; 24-OCT-2000; 28-NOV-2000; 208-NOV-2000; 210-DEC-2000; 20-DEC-2000; 220-DEC-2000; 220-DEC-2001; 226-FEB-2001; 226-FEB-2001; 209-MAR-2001; 214-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MAR-2001; 210-MA

The invention relates to one hundred and twenty two nucleic acids concoding PRO polypeptides. The sequences of the 122 PRO polynucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, concode human secreted proteins. The PRO nucleic acids, polypeptides, concode human secreted proteins. The PRO nucleic acids, polypeptides. Concoder, colon cancer, breast tumour, prostate tumour, rectal tumour or cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or concoderation of, or gene expression, in pericyte cells, for the proliferation of, or gene expression, in pericyte cells, for the proliferation or differentiation of chondrocyte cells, for concoderation of the proliferation of normal human blood, stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal for stimulating the proliferation of normal human dermal for stimulating the proliferation of normal human dermal concoderations in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABK3356-ABK33657 represent human concoderation coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess today or nutritional purposes. The present sequence is a cDNA biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-AUG-2001.
